Education

- B.S. in Computer Science and Eng. from Ohio State University — Graduated August 2026
- Software Eng. Coursework at Rochester Inst. of Tech. — August 2021 - May 2022

Experience

Software Engineer Intern at Denso International America, Michigan — May 2025 - August 2025

- Developed a backend data simulation pipeline using Python and C for testing software libraries on virtual hardware, enabling earlier testing.
- Built UI using TypeScript, React, HTML, and CSS with live graphs and values that let engineers visually compare simulated data against real-world data.
- Set up CI/CD pipelines that automatically ran unit and integration tests on every commit, catching issues earlier in development.
- Participated in an Agile team, using Jira to break down user stories, estimate tasks, and track sprint progress, and incorporated feedback from code reviews to improve code quality.

Software Engineer Intern at Accurate Group, Ohio — October 2022 - June 2023

- Built a UI automation testing framework using Java and Selenium for a web and native application to reduce time spent on manual testing.
- Wrote documentation and trained the QA team, enabling them to run and maintain the automated tests.

Projects

PhotoMap

- Developed an iOS app using Swift that lets users log photos by location on a map, complete challenges, connect with friends, and compete on a leaderboard.
- Utilized an SQL database to store and retrieve user profiles, photo information, challenges, and leaderboard data.
- Designed an initial UI and user flow diagram in Figma and implemented it using SwiftUI.
- Leveraged Claude Code for code reviews and test orchestration.
